Fast Shipping

Bradley's **BradEX®** shipping program allows you to prepare for upcoming inspections and respond to changing workplace needs. Fast replacements are just a phone call away and will ship within two days. The **BradEX®** shipping feature is available for a wide range of product, at no extra cost.

Halo EYE/FACEWASH

Halo™ surrounds you with the fastest, most effective relief in the industry. Bradley's new eye & eye/face wash provides the most washdown coverage for your face of any model on the market. In an emergency, your eyes and face can't afford to trust anything but the best in the industry.

- 1** Enhanced dust cover design in clear translucent yellow allowing for easy inspection. When the cover is opened, water flow starts automatically giving the user instant relief.
- 2** New ergonomic hand activation is easy to reach from any direction.
- 3** Separate supply waste and pipes to eye/face wash are industry first and exclusive to Bradley!
- 4** The Aquaduct™ design is the only selfdraining design for standard Eyewash models – another industry first and Bradley exclusive. The self-draining Aquaduct helps reduce the risk of bacteria growth when unit is not in use. Integral strainer inside the Aquaduct reduces debris in the water for additional eye protection and also prevents clogging.
- 5** New dust cover caps on the Eyewash are hinged for a more secure hold – keeping dust and debris off the water spouts.

SpinTec™ SHOWERHEADS

SpinTec™ showerheads incorporate the latest technology in fluid dynamics and provide the most consistent distribution of water from a drench shower. That means the fastest, most effective removal of contaminants in the industry.

SpinTec Standard Showerhead

Showerhead is constructed of ABS plastic so it is highly corrosion resistant.

- 1** Integral flow control provides a minimum of 20GPM (761 L/Min)
- 2** Contoured shape focuses water for faster washdown
- 3** Spinning motion of water creates optimal spray pattern

Smaller profile reduces risk of damage in busy industrial environments

SpinTec Uniform Distribution

OLD Uneven Distribution

SpinTec High Performance Stainless Steel

The 304 & 316 Stainless Steel showerhead provides the maximum corrosion resistance and durability for highly corrosive and abusive applications.

Recessed Flush-Mounted SpinTec Showerhead

Provides the smallest footprint and clean appearance of in-ceiling mounting. Easy to install.

SpinTec Showerhead with Stainless Steel Shroud

Provides new showerhead with a traditional looking shroud.

Keltech

Electric Water Heaters

Tough enough for the most extreme environments on earth

On demand supply of ANSI-required tepid water for safety showers and eye/face washes – in seconds.

- No need to keep a 300 gal (1136 L) tank heated 24/7/365
- Easy to install – just add water and power. All you need is one electrical connection and a cold water line
- Under constant flow and pressure, temperatures stay within +/-1° F of set point
- Precision systems custom engineered to fit your application
- Meets ANSI/ISEA Z358.1 standards and third-party verified to UL/CSA standards
- Only electric tankless water heaters registered with the National Board and certified with the HLW stamp
- Optional features include NEMA 4X stainless steel enclosures, explosion proof purge system, and freeze protection to -20°F

For information contact your Bradley Representative or visit bradleycorp.com

Environmental and hazardous chemicals and site conditions

Within these industries warranting additional consideration are shown below. This list is not intended to be exhaustive, but rather, to serve as a starting point to begin the evaluation process of what types of hazards warrant the installation of a drench shower or Eyewash fixture that provides an ANSI-compliant 15-minute flush. Industries subject to a higher accident ratio and an increased rate of OSHA audits are:

- Healthcare
- Industrial
- Education
- Construction
- Agriculture
- Government
- Hospitality
- Retail
- Laboratories
- Food Processing
- Paper Mills
- Automotive
- Mining
- Trades
- Aerospace
- Ethanol/Oil Refineries
- Wastewater Treatment
- Utilities

Common hazards that require a 15-minute flush

- Dust, dirt, salt, sand, cardboard, wood chips, powder, fine particulate
- Nails, wood splinters, staples
- Metal shavings, filings, dust, concrete, cement chips,
- Smoke, flammable or poisonous gases
- Insecticides, pesticides, herbicides, fumigants
- Solvents, stains, paint, thinner, acetone
- Bloodborne pathogens; blood, bodily fluids and remains
- Caustic water treatment chemicals
- Gas, diesel, cleaning solvents, antifreeze
- Laboratory chemicals, oxygen
- Bleach, chlorine, ammonia
- Battery acid, starter fluid, paints, oils, hydraulic fluid
- Bacteria, germs, biohazards
- Falling, flying or shifting debris, rocks, building materials and glass
- Thermal hazards, UV radiation burns (welder's flash), electrical arcs
- Acids, bases, solvents, lime
- Flammable liquids

Important information about compliance

The U.S. Code of Federal Regulations 29CFR 1910.151 states: "Where the eyes or body of any person may be exposed to injurious corrosive materials, suitable facilities for quick drenching or flushing of the eyes and body shall be provided within the work area for immediate emergency use."

The American National Standards Institute (ANSI) establishes standards for minimum performance and use requirements for Eyewash and shower equipment.

The ANSI/ISEA Z358.1-2014 for Emergency Eyewash and Shower Equipment provides detailed guidelines to which OSHA, State OSHA and other regulatory agencies commonly refer.

The Joint Commission 2014 EC Standard for Hospitals requires: "The hospital takes action to minimize or eliminate identified safety and security risks in the physical environment." Furthermore, hospitals are required to "Minimize risk associated with selecting, handling, storing, transporting, using, and disposing hazardous chemicals." Surveyors commonly refer to OSHA requirements and the ANSI Standard for further guidance on best demonstrated practices.

Canadian Provincial authorities also typically refer to ANSI standards when auditing for or advising proper requirements for emergency Eyewash showers.

S19-110 Series

Overview

When there's the possibility of full-body chemical contamination, the first choice is an ANSI-compliant, full-body drench shower. Bradley drench showers, the S19-110 line of products, are a great choice when a wall-mounted drench shower isn't practical. And with the BradTect® corrosion-resistant yellow coating standard on most units, these drench showers are not only easy to see, but durable enough for your tough work environment.

Key Features

- SpinTec showerhead improves water distribution
- Exceeds ANSI minimum water flow of 20 GPM (76 L/Min) at 30 psi (207 kPa)
- Stay-open ball valve with single-step activation
- Triangular stainless steel pull rod
- Universal ID sign
- BradTect corrosion-resistant yellow coating (except on stainless steel, PVC and chrome models)
- 1¼" (32 mm) NPT inlet
- One-year warranty
- Top- or mid-level supply standard on all drench showers and combination units
- ANSI/ISEA Z358.1 certified models available
- AS/NZS4775:2007 & AS4020 certified models available

Emergency Fixture Facts

Drench showers are required to have 16" (406 mm) of clearance around the fixture, from the center of the spray pattern. ANSI /ISEA Z358.1 Section 4.1.4

Suggested Accessories

Standard and Explosion-Proof Signaling Systems	page 56-58
Drench Hose Spray Kits	page 84
Freeze and Scald Protection Valves	page 86

Other parts and accessories are listed beginning on page 84

Recommended Emergency TMV

Navigator® EFX 25 (S19-2100)

The current ANSI standard calls for emergency Eyewashes and drench showers to deliver tepid water (60–100°F/15.5–37.7°C) for 15 minutes. A thermostatic mixing valve is needed to mix the hot and cold water supply. Bradley's Navigator® TMVs are the most reliable emergency TMVs on the market. One valve is required per plumbed unit.

Quick Compliance Guide

This guide serves as a supplement to the ANSI/ISEA Z358.1-2014 standard.

Safety Drench Showers

- Valve mechanism opens in one second or less; it stays open until manually closed. (Section 4.2) ①
- Supply with flushing fluid ("potable water, preserved water, preserved buffered saline solution or other medically acceptable solution..."). (Definitions, Sections 4.1.1, 4.4.1)
- Locate 10 seconds or 55' (16.8 m) from contaminants or hazardous materials. Locate on the same plane as hazard and free of obstructions. (Section 4.5.2, Appendix B5)
- Doors are an obstruction. (Appendix B5)
- Must resist corrosion in the presence of flushing fluid. (Section 4.1.5)
- Audible, visual and central control signal systems deter vandals and notify personnel that an accident occurred. (Appendix B4)
- Environmental conditions often require freeze or scald protection equipment. (Section 4.5.5)

Top down view

Requires a 16" (406 mm) radius from the center of the drench shower spray pattern to be free of obstructions. (Section 4.1.4) ②

15-minute Flush	Tepid Water	Third-Party Certifications	Weekly Activations:	Annual Inspections
Compliant showers release a continuous flow of at least 20 GPM (76 L/Min) of tepid flushing fluid for a period of at least 15 minutes. (Sections 4.1.2, 4.4.1, 4.5.5, 4.5.6)	(lukewarm) 60–100°F (15.6–37.8°C) encourages full 15 minute flush or until medical personnel arrive. (Definitions, Sections 4.5.6, Appendix B6)	Manufacturers may have their safety fixtures independently evaluated by a third-party testing organization. Look for certification when selecting a compliant fixture. (Definitions)	Flush lines and test by activating weekly. Inspection tags are often included with fixtures to document testing and to satisfy a safety audit. (Section 4.6.2)	ANSI recommends a comprehensive annual inspection of the facility to evaluate modified work space, assess new hazards introduced into the area, and to identify fixtures needing replacement or repair. (Section 4.6.5)

S19-120 and S19-130 series

Overview

A drench shower is required anywhere a MSDS sheet indicates that a full body flush may be required or where exposure to hazardous material is likely. Bradley's drench showers provide a complete full body deluge of water, to ensure that contaminants are rinsed from the body as rapidly and efficiently as possible. With water resources at a premium, Bradley's patented design features an integral 22 GPM (83 L/Min) flow restrictor that works in tandem with the showerhead flow pattern to ensure that the most effective ANSI 15-minute flush is achieved. Maximize your precious water resources by choosing Bradley.

Key Features

- SpinTec showerhead improves water distribution
- Stainless steel pull rod with triangular handle
- Stay-open ball valve
- BradTect coated galvanized steel pipe
- Horizontal/vertical: 1" (25 mm) water supply
- Freestanding: 1¼" (32 mm) water supply
- ANSI/ISEA Z358.1 certified models available
- AS/NZS4775:2007 & AS4020 certified models available
- One-year warranty

Emergency Fixture Facts

Bradley equips all ANSI-compliant emergency fixtures with a valve that will stay open until manually closed, allowing the user free use of their hands during an emergency. ANSI/ISEA Z358.1 Section 4.2

- Same features as S19-130SSBF except with BSPP thread
- Certified to AS4775 and AS4020

Flow Controls

In the interest of water conservation, each shower head features an integral 20 GPM (76 L/Min) flow control. This item must be purchased separately for most competing brands.

Frost Proof

Bradley features frost-proof emergency fixtures for when an adjacent outside wall of a heated building is available. They can also be free standing with a buried supply pipe. See your local plumbing codes for code compliance.

Barrier Free

Halo models are barrier-free. This provides ease of use for individuals with disabilities.

S19214 Series

Overview

Safety and maintenance personnel often select pedestal-mounted Eyewashes where a wall-mounted fixture is not practical due to site conditions. As a leading manufacturer of emergency fixtures, Bradley provides a variety of Eyewash solutions; barrier-free, frost-proof or stainless steel fixtures with a variety of different spray patterns. Committed to providing a strong value proposition, Bradley also offers complimentary safety inspections to facilities, providing expert advice about emergency fixture solutions.

Key Features

- Halo Eyewashes and eye/face washes provide the most washdown coverage available
- Exceed ANSI-mandated flow rates
- Universal activation
- BradTect coated galvanized steel pipe
- ½" (13 mm) water supply, 1¼" (32 mm) waste
- All pedestal-mounted units with Halo meet barrier-free requirements
- One-year warranty
- ANSI/ISEA Z358.1 certified models available
- AS/NZS4775:2007 & AS4020 certified models available

Emergency Fixture Facts

The emergency fixture must provide a continuous flow of flushing fluid. ANSI/ISEA Z358.1 Section 5.4.5, 6.4.5

Quick Compliance Guide

This guide serves as a supplement to the ANSI/ISEA Z358.1-2014 standard.

Eye and Eye/Face Wash Fixtures

- Valve mechanism opens in one second or less; it stays open until manually closed. (Sections 5.2, 6.2) **1**
- Supply with flushing fluid, ("potable water, preserved water, preserved buffered saline solution or other medically acceptable solution...") Definitions, Sections 5.1.1, 6.1.1)
- Locate 10 seconds or 55' (16.8 m) from contaminants or hazardous materials. Locate on the same plane as hazard and free of obstructions. (Sections 5.4.2, 6.4.2, Appendix B5)
- Must resist corrosion in the presence of flushing fluid. (Sections 5.1.5, 6.1.5) **2**
- Protect eye and eye/face wash heads from contaminants. (Sections 5.1.3, 6.1.3)
- Flow Rates: **Eyewash** unit delivers a minimum of .4 GPM (1.5 L/Min) for 15 minutes. (Section 5.1.6) **Eye/face wash** unit delivers a minimum of 3.0 GPM (11 L/Min) for 15 minutes. (Section 6.1.6)
- Use a flow meter to test flow rate; use a test gauge to test flow pattern. (Sections 5.1.8, 5.3.1, 6.1.7, 6.1.8, 6.3, 6.3.1)
- Audible, visual and central control signal systems deter vandalism and alert safety personnel. (Appendix B4)
- Environmental conditions often require freeze or scald protection equipment. (Sections 5.4.5, 6.4.5)

Top down view

Required to be free of obstructions a minimum of 6" (152 mm) from the outside of the eye or eye/face wash sprayheads. (Sections 5.4.4, 6.4.4) **3**

Use a Bradley test gauge (Model 269-1444) to check flow pattern. **4**

15-minute Flush	Tepid Water	Third-Party Certifications	Weekly Activations:	Annual Inspections
Compliant fixtures release a continuous flow of tepid flushing fluid for a minimum of 15 minutes. (Sections 5.1.6, 5.4.5, 5.4.6, 6.1.6, 6.4.5, 6.4.6)	(lukewarm) 60–100°F (15.6–37.8°C) encourages full 15 minute flush or until medical personnel arrive. (Definitions, Sections 5.4.6, 6.4.6, Appendix B6)	Manufacturers may have their safety fixtures independently evaluated by a third-party testing organization. Look for certification when selecting a compliant fixture. (Definitions)	Flush lines and test by activating weekly. Inspection tags are often included with fixtures to document testing and to satisfy a safety audit. (Sections 5.5.2, 6.5.2)	ANSI recommends a comprehensive annual inspection of the facility to evaluate modified work space, assess new hazards introduced into the area, and to identify fixtures needing replacement or repair. (Sections 5.5.2, 5.5.5, 6.5.2, 6.5.5)

Eyewashes

When the safety risk targets the eye area, Bradley's Eyewashes are the recommended solution for emergency care. The Eyewash sprayheads flow at approximately 5.1 GPM (19 L/Min), exceeding ANSI's 0.4 GPM (1.5 L/Min) flow rate. The flow gently flushes water directly on the eye to wash out contaminants.

Eye/Face Washes

When chemicals and other hazardous liquids can contaminate the face and eyes, an eye/face wash is the solution. Bradley's eye/face wash heads feature integral flow controls that provide a soft flush of approximately 5.1 GPM (19 L/Min). Eye/face washes are considered premium fixtures that exceed ANSI's 3.0 GPM (11 L/Min) mandate.

Dust Covers

The most effective way to keep the unit clean and functioning properly is to have a dust cover over the eye or eye/face wash. See-through plastic dust covers provide effective dust protection, but also allow for easy inspection. These covers automatically open when the eye or eye/face wash is activated. Dust covers are available as standard equipment on many eye and eye/face washes, or can be ordered as a retrofit kit.

Foot Treadle

Foot treadles provide hands-free activation for eye and eye/face washes. Foot treadles are available as standard equipment on some eye and eye/face washes, or can be ordered as a retrofit kit.

S19224 series

Overview

Wall-mounted emergency units are classic fixtures that originated from safety's early days. The classic fixture evolved from a basic Eyewash model with little to no options, to the fixtures of today with standard high visibility, yellow corrosion-resistant coating, plastic and stainless steel dust covers, various flow rates and flow patterns to flush the most elusive contaminants from the face. Wall-mounted fixtures are among the most compact, versatile safety solutions on the market. They can be found in industrial facilities, airports, auto repair shops, food processing environments and paper mills to name a few.

Key Features

- Halo Eyewashes and eye/face washes provide the most washdown coverage available
- Dust cover protects fixture from dust and debris
- Fixtures exceed ANSI-mandated flow rates
- Single-step activation
- BradTect corrosion-resistant yellow coating
- Wall-mounted units with Halo meet barrier-free requirements
- ANSI/ISEA Z358.1 certified models available
- AS/NZS4775:2007 & AS4020 certified models available
- One-year warranty

Emergency Fixture Facts

An ANSI-compliant Eyewash provides 15-minutes of flushing fluid.

Suggested Accessories

Standard and Explosion-Proof Signaling Systems	page 56–58
Drench Hose Spray Kits	page 84
Freeze and Scald Protection Valves	page 86
Retrofit Dust Cover Kits	page 88, 90–91
Foot Treadle Kits	page 95

Other parts and accessories are listed beginning on page 84

Recommended Emergency TMV

Navigator EFX 8 (S19-2000)

The current ANSI standard calls for emergency Eyewashes and drench showers to deliver tepid water (60–100°F/15.5–37.7°C) for 15 minutes. A thermostatic mixing valve is needed to mix the hot and cold water supply. Bradley's Navigator TMVs are the most reliable emergency TMVs on the market. One valve is required per plumbed unit.

Eye and Eye/Face Wash Bowls

Bradley's eye and eye/face wash bowls come in two different materials – plastic and stainless steel. The high-visibility plastic bowls are intended for general use. The impact-resistant plastic will stand up to regular wear and tear. For the most durable bowl, select stainless steel bowls for rugged environments, where impact and corrosion could be a problem.

Dust Covers

The most effective way to keep the unit clean and functioning properly is to have a dust cover over the eye or eye/face wash. See-through plastic dust covers provide effective dust protection, but also allow for easy inspection. These covers automatically open when the eye or eye/face wash is activated. Dust covers are available as standard equipment on many eye and eye/face washes, or can be ordered as a retrofit kit.

Frost Proof

Bradley features frost-proof emergency fixtures for when an adjacent outside wall of a heated building is available. They can also be free standing with a buried supply pipe. See your local plumbing codes for code compliance.

Barrier Free

Halo models are barrier-free. This provides ease of use for individuals with disabilities.

S19314 Series

Overview

Bradley's S19314 Series is the most complete safety fixture on the market. The drench shower provides full-body relief from contamination, and the eye or eye/face wash targets those areas of the body where a gentle spray of water is optimal.

Key Features

- Halo Eyewashes and eye/face washes provide the most washdown coverage available
- SpinTec showerhead improves water distribution
- Stay-open ball valve with single-step activation
- Triangular stainless steel pull rod
- BradTect corrosion-resistant yellow coating (except on stainless steel, PVC and chrome models)
- Frost-proof and barrier-free models available
- Universal ID sign
- Top- or mid-level supply standard on all drench showers and combination units
- Integrated eye or eye/face wash with capped Eyewash heads
- One-year warranty
- 1¼" (32 mm) NPT inlet
- Single-step eye or eye/face wash activation
- Single-step drench shower activation
- ANSI/ISEA Z358.1 certified models available
- AS/NZS4775:2007 & AS4020 certified models available

Emergency Fixture Facts

Locate safety fixtures 10 seconds or 55' (16.8 m) from a hazardous area. ANSI/ISEA Z358.1 Section 7.4.2, Appendix B5

Suggested Accessories

Standard and Explosion-Proof Signaling Systems	page 56–58
Drench Hose Spray Kits	page 84
Freeze and Scald Protection Valves	page 86
Retrofit Dust Cover Kits	page 88, 90–91
Foot Treadle Kits	page 95

Other parts and accessories are listed beginning on page 84

Recommended Emergency TMV

Navigator EFX 25 (S19-2100)

The current ANSI standard calls for emergency Eyewashes and drench showers to deliver tepid water (60–100°F/ 15.5–37.7°C) for 15 minutes. A thermostatic mixing valve is needed to mix the hot and cold water supply. Bradley's Navigator TMVs are the most reliable emergency TMVs on the market. One valve is required per plumbed unit.

Quick Compliance Guide

This guide serves as a supplement to the ANSI/ISEA Z358.1-2014 standard.

Combination Drench Shower, Eye and Eye/Face Washes

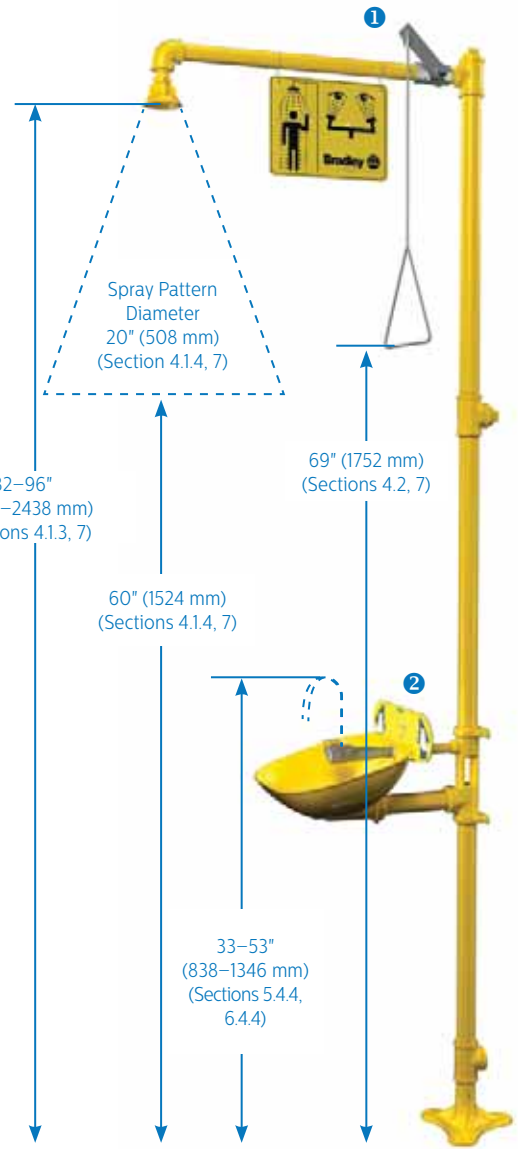

- Valve mechanism opens in one second or less; it stays open until manually closed. (Sections 4.2, 5.2, 6.2, 7.1.1, 7.1.2, 7.1.3) **1**
- Drench shower and eye or eye/face wash must operate simultaneously. (Section 7.4.4)
- Supply with flushing fluid ("potable water, preserved water, preserved buffered saline solution or other medically acceptable solution..."). (Definitions, Sections 4.1.1, 4.4.1, 5.1.1, 6.1.1, 7.1.2, 7.1.3)
- Locate 10 seconds or 55' (16.8 m) from contaminants or hazardous materials. Locate on same plane as the hazard, free of obstructions. (Sections 4.5.2, 5.4.2, 6.4.2, 7.1.1, 7.1.2, 7.1.3, 7.4.2, Appendix B5) **2**
- Must resist corrosion in the presence of flushing fluid (Sections 4.1.5, 5.1.5, 6.1.5, 7.1.1, 7.1.2, 7.1.3)
- Protect eye and eye/face wash heads from contaminants. (Sections 5.1.3, 6.1.3, 7.1.2, 7.1.3)
- Flow Rates: **Eyewash** unit delivers a minimum of .4 GPM (1.5 L/Min) for 15 minutes. (Section 5.1.6) **Eye/face wash** unit delivers a minimum of 3.0 GPM (11 L/Min) for 15 minutes. (Section 6.1.6)
- Use flow meter to check flow rate; use test gauge to test flow pattern. (Sections 5.1.8, 5.3.1, 6.1.7, 6.3, 7.1.2, 7.1.3)
- Environmental conditions often require freeze or scald protection equipment. (Sections 4.5.5, 5.4.5, 6.4.5, 7.1.1, 7.1.2, 7.1.3)

Top down view

Requires a 16" (406 mm) radius from the center of the drench shower spray pattern to be free of obstructions. (Sections 4.1.4, 7.1.1) **3**

Required to be free of obstructions a minimum of 6" (152 mm) from the outside of the eye or eye/face wash sprayheads. (Sections 5.4.4, 6.4.4, 7.1.2, 7.1.3)

Use a Bradley test gauge (Model 269-1444) to check flow pattern. **4**

15-minute Flush	Tepid Water	Third-Party Certifications	Weekly Activations:	Annual Inspections
Compliant showers release a continuous flow of at least 20 GPM (76 L/Min) of tepid flushing fluid for a period of at least 15 minutes. (Sections 4.1.4, 4.4.1, 4.5.5, 4.5.6, 7.1.1) Compliant eye or eye/face wash fixture releases a continuous flow of flushing fluid for a minimum of 15 minutes. (Sections 5.1.6, 5.4.5, 5.4.6, 6.1.6, 6.4.5, 6.4.6, 7.1.2, 7.1.3)	(lukewarm) 60–100°F (15.6–37.8°C) encourages full 15-minute flush or until medical personnel arrive. (Definitions, Sections 4.5.6, 5.4.6, 6.4.6, Appendix B6)	Manufacturers may have their safety fixtures independently evaluated by a third-party testing organization. Look for certification when selecting a compliant fixture. (Definitions)	Flush lines and test by activating weekly. Inspection tags are often included with fixtures to document testing and to satisfy a safety audit. (Sections 4.6.2, 5.5.2, 6.5.2, 7.5.2)	ANSI recommends a comprehensive annual inspection of the facility to evaluate modified work space, assess new hazards introduced into the area, and to identify fixtures needing replacement or repair. (Section 7.5.5) (Section 4.6.5)

S19-310PVC

Drench Showerheads

Bradley's drench showers are available with either a plastic or stainless steel showerhead. The plastic showerheads are high-visibility yellow and made of impact-resistant material. For the most durable showerhead, select stainless steel which stands up to corrosion and aggressive impact.

Eye and Eye/Face Wash Bowls

Bradley's eye and eye/face wash bowls come in two different materials – plastic and stainless steel. The high-visibility plastic bowls are intended for general use. The impact-resistant plastic will stand up to regular wear and tear. For the most durable bowl, select stainless steel bowls for rugged environments, where impact and corrosion could be a problem.

Dust Covers

The most effective way to keep the unit clean and functioning properly is to have a dust cover over the eye or eye/face wash. See-through plastic dust covers provide effective dust protection, but also allow for easy inspection. These covers automatically open when the eye or eye/face wash is activated. Dust covers are available as standard equipment on many eye and eye/face washes, or can be ordered as a retrofit kit.

Foot Treadle

Foot treadles provide hands-free activation for eye and eye/face washes. Foot treadles are available as standard equipment on some eye and eye/face washes, or can be ordered as a retrofit kit.

Flow Controls

In the interest of water conservation, each shower head features an integral 20 GPM (76 L/Min) flow control. This item must be purchased separately for most competing brands.

S19314 Series Configurator

Don't see a model that meets your application? Use the selections below to build one to suit your needs. Select one option from each category. Fill in the squares below with the corresponding option letter or number. Use the resulting alphanumeric number to specify the model and configuration for your desired product.

1 Configuration

- A** 6 in (15.2 cm) Drain Height, Barrier Free
- B** 24 in (61 cm) Drain Height
- C** 24 in (61 cm) Drain Height, Barrier-Free
- O** 6 in (15.2 cm) Drain Height, Standard

2 Pipe Material

- A** NPT*, Yellow BradTect Galvanized Steel, 1.25 in (32 mm)
- B** NPT*, All 304 Stainless Steel, 1.25 in (32 mm)
- C** NPT*, All 316 Stainless Steel,* 1.25 in (32 mm)
- D** NPT*, Chrome-Plated, 1.25 in (32 mm)
- F** BSPP°, Yellow BradTect Galvanized Steel, 1.25 in (32 mm)
- G** BSPP°, All 304 Stainless Steel, 1.25 in (32 mm)
- H** BSPP°, All 316 Stainless Steel, 1.25 in (32 mm)
- J** BSPP°, Chrome-Plated, 1.25 in (32 mm)

3 Ball Valve

- 1** Stay-Open Shower and Eyewash, Chrome-Plated Brass
- 2** Stay-Open Shower and Eyewash, 316 SS
- 3** Self-Closing Shower and Stay-Open Eyewash, Chrome-Plated Brass**

4 Showerhead

- A** Plastic Showerhead, 3.1 in (7.9 cm) diameter Standard
- B** Plastic Showerhead, 10 in (25.4 cm) diameter Plastic Shroud
- C** Plastic Showerhead, 10.75 in (27.3 cm) diameter Stainless Steel Shroud

NEW!

S19-304 Series

Overview

Bradley Heat Trace Showers are engineered to ensure water doesn't freeze in the fixture, down to -50°F (-46°C). These durable freeze protected showers help keep employees safe in extreme, frigid environments. The high-visibility fixture is insulated and covered by a yellow plastic shell, it features an integral freeze protection bleed valve, and is electrically rated for use in General Area, Class I Division 2, Class I Division 1, and Class II Division 1 and 2 locations.

Heat trace fixtures are available with an optional signaling system, indicator light, extension cable, drench hose, stainless steel material, and anti-scald valve.

Key Features

- General area and hazardous location models
- Freeze protection valve ensures continual flow of water should power fail
- SpinTec showerhead improves water distribution
- Halo Eyewash technology delivers the most effective washdown coverage
- Bowl and dust cover always included
- Classified by Underwriters Laboratories Inc to ANSI Z358.1

Emergency Fixture Facts

In geographic areas where an emergency fixture may freeze, safety personnel should consider purchasing a freeze-protected fixture or additional accessories to prevent the pipes from freezing. ANSI/ISEA Z358.1 Section 6.4.5

Model S19-304GATL
General Area with
Indicator Lights

Recommended Emergency TMV

Navigator EFX 25 (S19-2100)

The current ANSI standard calls for emergency Eyewashes and drench showers to deliver tepid water (60–100°F/ 15.5–37.7°C) for 15 minutes. A thermostatic mixing valve is needed to mix the hot and cold water supply. Bradley's Navigator TMVs are the most reliable emergency TMVs on the market. One valve is required per plumbed unit.

S19-304GAT

For use in general areas where temperatures fall below freezing

120 VAC protects until from freezing down to -50° F (-46°C)

1¼" NPT (top supply)

1¼" galvanized steel pipe

3.1" (78.7mm) diameter, impact-resistant plastic SpinTec Showerhead

Halo Eye/Face Wash

ABS Plastic Halo Eye/Face Wash

Ergonomic hand activation Eyewash paddle

S19-304GAT

S19-304D2T

For use in Class I Division 2 areas where temperatures fall below freezing

120 VAC protects until from freezing down to -50° F (-46°C)

1¼" NPT (top supply)

1¼" galvanized steel pipe

3.1" (78.7mm) diameter, impact-resistant plastic SpinTec Showerhead

Halo Eye/Face Wash

ABS Plastic Halo Eye/Face Wash

Ergonomic hand activation Eyewash paddle

S19-304D2T

S19-304GAB

Same features as S19-304GAT except with bottom water supply

S19-304GATL

For use in general areas where temperatures fall below freezing

120 VAC protects until from freezing down to -50° F (-46°C)

1¼" NPT (top supply)

1¼" galvanized steel pipe

3.1" (78.7mm) diameter, impact-resistant plastic SpinTec Showerhead

Halo Eye/Face Wash

ABS Bowl and dust cover (transparent cover)

Ergonomic hand activation Eyewash paddle

General Area Indicator Lights

S19-304GATL

S19-304D2B

Same features as S19-304GAT except with bottom water supply

S19-304D2TL

For use in Class I Division 2 areas where temperatures fall below freezing

120 VAC protects until from freezing down to -50° F (-46°C)

1¼" NPT (top supply)

1¼" galvanized steel pipe

3.1" (78.7mm) diameter, impact-resistant plastic SpinTec Showerhead

ABS Plastic Halo Eye/Face Wash

Ergonomic hand activation Eyewash paddle

Class I Division 2 Indicator Lights

S19-304D2TL

S19-304GABL

Same features as S19-304GATL except with bottom water supply

S19-304D2BL

Same features as S19-304D2TL except with bottom water supply

Heat Trace Combination Drench Shower and Eye/Eye-Face Wash

S19-304 Series Features

- **Electric heat trace cable:**
 - Thermal rating 5 watts/foot
 - Self regulated to -50°F (-45.5°C)
 - Protects against overheating and cold spots
 - ¾" (19 mm) polyethylene pipe insulation
- **Insulated and covered by high-visibility yellow ABS plastic shell**
 - Easy to maintain
 - Six easy-to-remove sections
- NEMA 4X rated electrical enclosure
- Signaling Systems can be easily added to all units
- Thermostat opens at 64°F (18°C) and closes at 54°F (12°C)
- Four-hub, aluminum junction box accepts ¾" (19 mm) conduit for hazardous locations
- Plastic junction box with one extra ¾" conduit hole for General Area locations
- Freeze valve opens at 35°F (2°C) internal water temperature to prevent freezing
- Stainless steel pull rod with triangular handle
- Chrome-plated brass, stay-open ball valve
- ½" (13 mm) Eyewash valve
- 1" (25 mm) shower valve
- UL Plumbing listed to meet ANSI/ISEA Z358.1
- CSA electrical certification for use in United States and Canada (cCSAus)

Additional product information, including Technical Data and Installation Instructions, is available online at bradleycorp.com.

Standard selections are in bold.

Selection should be made in each category. Incoming supply (top or bottom) must be indicated.

Electrical Class

- GA** General Area

Anti-Scald Valve

- O** No Anti-Scald Valve
- S Anti-Scald Valve

Extension Cable

- O** No Extension Cable
- E Extension Cable

*Must select stainless steel yoke if ordering 304 or 316 stainless steel pipe.

Recommended Option:

S19-324 Series Signaling Systems (pg 56)

According to ANSI guidelines, audible signaling systems may be a desirable accessory to audibly or electronically alert safety personnel that an emergency occurred. (ANSI/ISEA Z358.1)

INDOOR & OUTDOOR MODELS

Overview

Protect your people from extreme environments with a customized safety solution. Turnkey shower, Eyewash and drench hose systems offer an injured party a humane triage experience. Enclosed safety systems address the physical and psychological needs of the injured party by providing privacy, delivering warm water, warm ambient temperature and a shelter from the elements. Armed with a fire-rated insulated fiberglass structure, tepid water delivery capabilities, and reliable chemical and corrosion resistance, Bradley's enclosed safety shower provides superior washdown capability in emergency situations, while withstanding harsh chemicals.

Key Features

- Innovative drenching technology featuring:
 - SpinTec showerhead for improved water distribution
 - Halo rinsing platform
- **Superior design standards:**
 - Fiberglass-Reinforced Plastic
 - R-8 insulation rating
 - Indoor and Outdoor models
- **Premium features come standard:**
 - Integral drain
 - Portable
 - Drench hose
- Flame-retardant resin with a Class 1 Flame Spread Index per ASTM E-84
- 100% fiberglass surround construction highly resistant to chemicals and corrosion
- Ideal for both indoor and outdoor applications
- Custom engineered systems available

Emergency Fixture Facts

Safety systems with multiple drenching platforms, (shower, Eyewash and drench hose) must be capable of simultaneous activation while delivering tepid water for a duration of 15 minutes. ANSI/ISEA Z358.1 Section 7.4.4

An enclosure is recommended to protect against cold ambient temperatures. ANSI/ISEA Z358.1 Appendix B6

Quick Compliance Guide

This guide serves as a supplement to the ANSI/ISEA Z358.1-2014 standard.

Enclosed Safety Showers

- Colder ambient temperature may require an enclosure for added protection. (Section B6)
- Valve mechanism opens in one second or less; it stays open until manually closed. (Sections 4.2, 5.2, 6.2, 7.1.1, 7.1.2, 7.1.3)
- Drench shower and eye or eye/face wash must operate simultaneously. (Section 7.4.4)
- Supply with flushing fluid ("potable water, preserved water, preserved buffered saline solution or other medically acceptable solution..."). (Definitions, Sections 4.1.1, 4.4.1, 5.1.1, 6.1.1, 7.1.2, 7.1.3)
- Locate 10 seconds or 55' (16.8 m) from contaminants or hazardous materials. Locate on same plane as the hazard, free of obstructions. (Sections 4.5.2, 5.4.2, 6.4.2, 7.1.1, 7.1.2, 7.1.3, 7.4.2, Appendix B5)
- Must resist corrosion in the presence of flushing fluid (Sections 4.1.5, 5.1.5, 6.1.5, 7.1.1, 7.1.2, 7.1.3)
- Protect eye and eye/face wash heads from contaminants. (Sections 5.1.3, 6.1.3, 7.1.2, 7.1.3)
- Requires a 16" (406 mm) radius from the center of the drench shower spray pattern to be free of obstructions. (Sections 4.1.4, 7.1.1)
- Required to be free of obstructions a minimum of 6" (152 mm) from the outside of the eye or eye/face wash sprayheads. (Sections 5.4.4, 6.4.4, 7.1.2, 7.1.3)
- Eye/face wash nozzle height 33–45" (83.8–114.3 cm) from standing surface. (Sections 5.4.4, 6.4.4, 7)
- Flow Rates:
An Eyewash delivers a minimum of .4 GPM for 15 minutes. (Sections 5.1.6, 7.1.2)
An eye/face wash delivers a minimum of 3.0 GPM (11 L/Min) for 15 minutes. (Sections 6.1.6, 7.1.3)
- Use flow meter to check flow rate; use test gauge to test flow pattern. (Sections 5.1.8, 5.3.1, 6.1.7, 6.3, 7.1.2, 7.1.3)
- Use a Bradley test gauge (Model 269-1444) to check flow pattern. **1**
- Environmental conditions often require freeze or scald protection equipment. (Sections 4.5.5, 5.4.5, 6.4.5, 7.1.1, 7.1.2, 7.1.3)

15-minute Flush	Tepid Water	Third-Party Certifications	Weekly Activations:	Annual Inspections
Compliant showers release a continuous flow of at least 20 GPM (76 L/Min) of tepid flushing fluid for a period of at least 15 minutes. (Sections 4.1.4, 4.4.1, 4.5.5, 4.5.6, 7.1.1) Compliant eye or eye/face wash fixture releases a continuous flow of flushing fluid for a minimum of 15 minutes. (Sections 5.1.6, 5.4.5, 5.4.6, 6.1.6, 6.4.5, 6.4.6, 7.1.2, 7.1.3)	(Lukewarm) 60–100°F (15.6–37.8°C) encourages full 15-minute flush or until medical personnel arrive. (Definitions, Sections 4.5.6, 5.4.6, 6.4.6, Appendix B6)	Manufacturers may have their safety fixtures independently evaluated by a third-party testing organization. Look for certification when selecting a compliant fixture. (Definitions)	Flush lines and test by activating weekly. Inspection tags are often included with fixtures to document testing and to satisfy a safety audit. (Sections 4.6.2, 5.5.2, 6.5.2, 7.5.2)	ANSI recommends a comprehensive annual inspection of the facility to evaluate modified work space, assess new hazards introduced into the area, and to identify fixtures needing replacement or repair. (Section 7.5.5) (Section 4.6.5)

Eye/Face Wash and Shower Models

Overview

The safety of your employees is paramount. Keltech electric tankless emergency water heaters control systems are engineered to ensure that water temperature is just right – not too hot, not too cold. Under constant flow and pressure, temperatures stay within $\pm 1^\circ\text{F}$ of set point. If the flow rate changes drastically, there is no need to worry about being scalded. These units sense the transition and purge latent heat, keeping the output temperature below 90°F (32°C). A separate set of circuits monitors for "over temperature" conditions. Large internal passageways minimize pressure drop.

These units perform on demand for efficient energy usage. Unlike boilers, tankless water heaters only draw energy when needed. Utility costs are minimized because there is no need to keep a 300 gal (1136 L) tank heated 24/7/365. Easy to install – just add water and power. All you need is one electrical connection and a cold water line. All models are precision-engineered with materials, such as copper tubing and robust brass castings, that exceed the standards of any application – anywhere in the world.

Key Features

- No need to keep a 300 gal (1136 L) tank heated 24/7/365
- Easy to install – just add water and power. All you need is one electrical connection and a cold water line
- Under constant flow and pressure, temperatures stay within $\pm 1^\circ\text{F}$ of set point
- Precision systems custom engineered to fit your application
- Meets ANSI/ISEA Z358.1 standards and third-party verified to UL/CSA standards
- Only electric tankless tempering systems that can be ASME and NB certified
- Optional features include NEMA 4X stainless steel enclosures, explosion proof purge system, and freeze protection to -20°F (-28°C)

Emergency Fixture Facts

ANSI requires that an emergency fixture be supplied with tepid flushing fluid between $60\text{--}100^\circ\text{F}$ ($15.5\text{--}37.7^\circ\text{C}$) to avoid premature cessation of the recommended 15 minute flush. ANSI/ISEA Z358.1 Section 7.4.5, Appendix B6

Brass/Copper heat exchangers meet NSF/ANSI 372

ASME Certification: Keltech units 63 kW and higher are the only electric tankless water heaters registered with the National Board and certified with the HLW stamp

For information contact your Bradley Representative or visit bradleycorp.com

For Safety Eye/Face Wash Applications

CLE SERIES

kW Range 18 – 25 kW

Flow Range 0.75 – 10 GPM (3 – 37.8 L/Min)

Standard Voltages 480V, 600V 3-Phase Delta

Temperature output fixed at 80°F (27°C)

Meets the ANSI/ISEA Z358.1 standards

Provide continuous tepid water for multiple incidents with zero recovery time and custom-tuned for minimal overshoot

85,000 - 170,000 BTUs

Manual reset cutoff

Auto reset high limit switch

Liquid-cooled solid state relays

NEMA 4 enclosure

Wall- or floor-mounted

¾" (19 mm) connections

ETL and cETL certified to UL and CSA Standards

Temperature safety values:
 Controller alarm 90°F (32°C)
 Auto reset high limit switch 95°F (35°C)
 Manual reset cutoff 100°F (38°C)

SNA SERIES

kW Range 36 – 144 kW

Flow Range 1.5 – 50 GPM (5.7 – 189.2 L/Min)

Standard Voltages 480V, 600V 3-Phase Delta

Temperature output fixed at 80°F (27°C)

Meets the ANSI/ISEA Z358.1 standards

Provide continuous tepid water for multiple incidents with zero recovery time and custom-tuned for minimal overshoot

Dual flow activation for reduced overshoot and energy savings

122,800 – 491,300 BTUs

Manual reset cutoff

Auto reset high limit switch

Door cutoff switch

Emergency stop button

Liquid-cooled solid state relays

NEMA 4 enclosure

Floor-mounted

1¼" (32 mm) connections

ETL and cETL certified to UL and CSA Standards

Temperature safety values:
 Controller alarm 90°F (32°C)
 Auto reset high limit switch 95°F (35°C)
 Overshoot purge 95°F (35°C)
 Manual reset cutoff 100°F (38°C)

For Safety Shower Applications

S19361

Pre-assembled safety fixture and SNA heater skid system

Halo™ Eye/Face Wash and SpinTec™ Drench Shower

54 - 144 kW (491,300 BTUs)

Molded Duragrate® and integrated shower pan

Temperature overshoot purge system

NEMA 4 enclosure standard

AL3 building communication alarm included

Dual Flow Heater Activation (Eye/Face Wash and/or Shower)

Internal fusing (included) adds safety and permits single power connection

Controller-locked temperature setting, output fixed at 80°F (27°C)

Meets ANSI/ISEA Z358.1 standards

ETL and cETL certified to UL and CSA Standards

Emergency stop button and door cutoff switch

S19361HF NEW!

Pre-assembled, freeze-protected safety fixture and SNA heater skid system

Bradley Halo Heat Trace S19-304 with SpinTec™

54 - 144 kW (491,300 BTUs)

Molded Duragrate® and integrated shower pan

Temperature overshoot purge system

NEMA 4 heat enclosure standard

AL3 building communication alarm option included

Dual Flow Heater Activation (Eye/Face Wash and/or Shower)

Internal fusing (included) adds safety and permits single power connection

Controller-locked temperature setting, output fixed at 80°F (27°C)

Meets ANSI/ISEA Z358.1 standards

ETL and cETL certified to UL and CSA Standards

Emergency stop button and door cutoff switch

Emergency Thermostatic Mixing Valves

Overview

Bradley's Navigator® emergency thermostatic mixing valves provide tepid water (60–100°F/15.5°–37.7°C) by mixing cold and hot water to a predetermined temperature. Tepid water encourages injured workers to remain beneath the deluge of water released from the emergency fixture, for the entire ANSI required 15-minute flush. ANSI/ISEA Z358.1-1998 first required tepid water and the 2004 standard outlined that definition of the temperature range in its appendix. Each Navigator Emergency TMV features a fixed cold-water bypass that will allow cold water to flow should the hot water exceed the predetermined temperature reflecting Bradley's commitment to customers, quality and its dedication to manufacturing quality products that protect your employees.

Key Features

- Reliable, liquid-filled thermostat
- Accurate temperature control to within $\pm 3^\circ$
- Dial thermometer
- Checkstops on inlets
- Built-in cold water bypass
- Positive shut-off of hot supply when cold supply is lost
- Dirt and lime resistant
- Factory assembled and tested
- Universal mounting capability
- Valves are preset at 85°F (29°C) and are adjustable from 65°F (18°C) to 95°F (35°C)
- All items comply with ANSI/ISEA Z358.1

S19-2000 EFX8

S19-2100 EFX25

S19-2300 EFX125

Emergency Fixture Facts

ANSI requires that an emergency fixture be supplied with tepid flushing fluid between 60–100°F (15.5°–37.7°C). ANSI/ISEA Z358.1 Section 7.4.5, Appendix B6

Thermostatic Mixing Valves

S19-2000 *	7 GPM (26 L/Min) @ 30 psi (207 kPa)	Accommodates one Eyewash or eye/ face wash
S19-2100	26 GPM (98 L/Min) @ 30 psi (207 kPa)	Accommodates one combination shower, one drench shower or multiple Eyewashes
S19-2150 *	19.5 GPM (74 L/Min) @ 30 psi (207 kPa)	Accommodates one drench shower or multiple Eyewashes
S19-2200	53.5 GPM (203 L/Min) @ 30 psi (207 kPa)	Accommodates up to two combination showers, two drench showers or multiple Eyewashes
S19-2250 *	48 GPM (182 L/Min) @ 30 psi (207 kPa)	Accommodates one combination shower, up to two drench showers or multiple Eyewashes
S19-2300	82 GPM (310 L/Min) @ 30 psi (207 kPa)	Accommodates up to three combination showers, three drench showers or multiple Eyewashes
S19-2350 *	72.5 GPM (274 L/Min) @ 30 psi (207 kPa)	Accommodates up to two combination showers, three drench showers, or multiple Eyewashes

ANSI Standard Z358.1 requires tempered water supply. Ratings provided at 30 psi (207 kPa), the minimum pressure required by ANSI/ISEA Z358.1 to be supplied to Eyewash, eye/face wash and combination units. Reference Bradley's Technical Data Sheets for a full listing of flow capacities.

* ASSE 1071 and cUPC certified

Additional Product Options

Finish	
R	Rough Brass (Standard)
C	Chrome-plated
Piped Assembly	
P*	Piped assembly with inlet and outlet shutoff
N*	Piped assembly only
Cabinets	
SS	Surface-mounted stainless steel
RS	Recessed stainless steel
SE	Surface-mounted white enamel
RE	Recessed white enamel
W	Plexiglas® window in door

* Option not available with S19-2000.
Standard with cabinet-mounted valves.

Navigator Skid Systems

The Bradley Navigator Skid is engineered for industrial applications that need a skid-mounted, TMV based tepid water system. The flexible design allows for recirculation system, booster pump, and larger storage tank options. One supply inlet and one power supply connection provide a tepid water system for one or more emergency Eyewash or drench showers.

MODEL: NTS1

General Area or Class I Division 2 Electrical Class

208V, 240, or 480V Supply Voltage

119-gallon standard or ASME Hot Water Tank

Optional Pressure Booster Pump, Recirculation Pump, Return Line, and Aquastat

MODEL: NTS2

General Area or Class I Division 2 Electrical Class

208V, 240, or 480V Supply Voltage

318-gallon ASME Hot Water Tank

Optional Pressure Booster Pump, Recirculation Pump, Return Line, and Aquastat

Emergency Signaling Systems

Overview

Whether your intent is to prevent vandalism caused by false activations, or to be sure your safety team and medical personnel are notified during an emergency, signaling systems may be the solution. Each Bradley signaling system is equipped with a double pole, double throw flow switch. To complement the audible and visual indicator, each flow switch and central control board provides extra sets of contacts necessary to connect the fixture to a central control system that monitors the fixture. Signaling systems provide peace of mind, they discourage vandals, yet notify safety personnel when and where an emergency occurs.

Key Features

- Automatic, audible and visual system
- Signal light and horn activate when shower or Eyewash is activated; pre-assembled
- Optional beacon or area lights
- Optional silence switch with auto reset
- Universal AC Input: 90-264 AC, 50-60 Hz
- Requires a minimum of 2.4 GPM (9 L/Min) water flow to activate
- ½" (13 mm) or 1¼" (32mm) NPT inlet piping
- Double pole, double throw flow switch

Emergency Fixture Facts

According to ANSI guidelines, audible signaling systems may be a desirable accessory to audibly or electronically alert safety personnel that an emergency occurred. ANSI/ISEA Z358.1, Appendix B4

Don't see the product you are looking for? Go to pages 60–62 to use the S19–324 Configurators

S19-322 Series

- Recessed signaling system
- Automatic, audible and visual signal system
- Signal light and horn activate when shower or eye wash is activated; preassembled
- 1/2" (13mm) or 1 1/4" (32mm) NPT inlet piping
- Double pole, double throw flow switch
- For indoor applications
- Universal AC Input: 90-264 AC, 50-60 Hz
- NEMA 1 signaling system

Amber signal light

S19-324 Series

- Automatic, audible and visual signaling system
- Signal light and horn activate when eye wash or shower is activated; pre-assembled
- Requires a minimum of 2.4 GPM (9 L/Min) water flow to activate
- 1/2" (13 mm) or 1/4" (32mm) NPT inlet piping
- Double pole, double throw flow switch
- For indoor and outdoor applications
- Extra set of contacts on central control board
- Universal AC Input: 90-264 AC, 50-60 Hz

S19-324E

- Brass UL listed 1/2" (13mm) flow switch
- NEMA 4X signaling system
- 6' (1.8 m) Cable
- For eye or eye/face wash
- Silence switch with auto reset
- Amber signal light

S19-324E

S19-324D

- Brass, UL listed 1/4" (32 mm) flow switch
- NEMA 4X signaling system
- 6' (1.8 m) Cable
- For drench showers or combination units
- Silence switch with auto reset
- Amber signal light

S19-324D

S19-324DG, S19-324DGW

- Brass UL listed 1/4" (32 mm) flow switch
- NEMA 4X signaling system
- 6' (1.8 m) Cable
- Silence switch with auto reset
- Green beacon light
- White area light (S19-324DGW only)
- For drench showers or combination units
- Amber signal light

S19-324DGW

S19-324EG, S19-324EGW

- UL listed 1/2" (13mm) brass flow switch
- NEMA 4X signaling system
- 6' (1.8 m) Cable
- Silence switch with auto reset
- Green beacon light
- White area light (S19-324EGW only)
- For eye wash or eye/face washes
- Amber signal light

S19-324EG

S19-324EGW

Explosion-Proof Emergency Signaling System (Class 1 Division 2, Groups B, C & D)

S19-324D2D

- NEMA 4X
- Brass UL listed 1/4" (32 mm) flow switch
- For drench shower or combination units
- Amber signal light
- S19-324D2DHT for S19-304 heat trace combination units

S19-324D2D

Explosion-Proof Emergency Signaling System (Class 1 Division 1, Groups C & D)

S19-324D1D

- NEMA 4X
- Brass UL listed 1/4" (32 mm) flow switch
- For drench shower or combination units
- Amber signal light
- S19-324D1DHT for S19-304 heat trace combination units

S19-324D1D

S19-460, S19-430 and S19-440 Series

Overview

Bradley deck-mounted or wall-mounted, dual head drench hoses qualify as an Eyewash when installed according to the ANSI/ISEA Z358.1 guidelines for Eyewashes. A dual head drench hose may be used to flush the eyes or body. In contrast, several single head drench hose models exist exclusively for the purpose of serving as auxiliary safety equipment during an emergency. Single head drench hoses may be deck-mounted, wall-mounted or installed as a retrofit in line with an already existing Eyewash or drench shower in particularly hazardous locations.

Key Features

- Plastic eye/face wash sprayheads
- 8' (2.4 m) drench hose standard (except where noted)
- Squeeze-activated handle (except where noted)
- Locking clip – continuous water flow once activated
- Deck-mounted models include deck mounting hardware
- Wall-mounted models include wall mounting hardware (except where noted)
- All items comply with ANSI/ISEA Z358.1

Emergency Fixture Facts

Dual head drench hoses may take the place of a traditional Eyewash if it complies with all Eyewash performance requirements in Section 5 and/or Section 6 of the standard such as being mounted 6" (152 mm) from any obstruction and 33-53" (838-1346 mm) from the top of the spray pattern to the floor.

ANSI/ISEA Z358.1 Section 8.2.1

Back-flow Preventers

To select the appropriate back-flow preventer, check with local governing authorities on local codes and ordinances.

Recommended Emergency TMV

Navigator EFX 8 (S19-2000)

The current ANSI standard calls for emergency Eyewashes and drench showers to deliver tepid water (60–100°F/15.5–37.7°C) for 15 minutes. A thermostatic mixing valve is needed to mix the hot and cold water supply. Bradley's Navigator TMVs are the most reliable emergency TMVs on the market. One valve is required per plumbed unit.

Quick Compliance Guide

This guide serves as a supplement to the ANSI/ISEA Z358.1-2014 standard.

Dual Head Eye/Face Wash & Drench Hose

- Considered an eye/face wash if it complies with the installation and performance requirements of the eye/face wash standard. (Sections 6, 8.2.1)
- Single-head drench hoses complement the 15-minute flush provided by a primary ANSI/ISEA Z358.1 compliant Eyewash fixture. (Section 8)
- Valve mechanism opens in one second or less; it stays open until manually closed. (Sections 6.2, 8.2.1)
- Fixtures compliant as an eye/face wash must remain "on" once activated (Sections 6.2, 8.2.1) **1**
- Supply with flushing fluid ("potable water, preserved water, preserved buffered saline solution or other medically acceptable solution...") (Definitions, Sections 6.1.1, 8.2.1) **2**
- Locate 10 seconds or 55' (16.8 m) from contaminants or hazardous materials. Locate on same plane as the hazard, free of obstructions. (Section 6.4.2, Appendix B5)
- Protect unit heads from contaminants. (Sections 6.1.3, 8.2.1)
- Flow Rates: Eye/face wash unit delivers a minimum of 3.0 GPM (11 L/Min) for 15 minutes. (Section 6.1.6, 8.2.1)
- Use a flow meter to test flow rate; use a test gauge to test flow pattern. (Sections 6.1.7, 6.3, 8.2.1)

Top down view

Required to be free of obstructions a minimum of 6" (152 mm) from the outside of the eye or eye/face wash sprayheads. (Sections 6.4.4, 8.2.1) **3**

Use a Bradley test gauge (Model 269-1444) to check flow pattern. **4**

15-minute Flush	Tepid Water	Third-Party Certifications	Weekly Activations:	Annual Inspections
Compliant fixtures release a continuous flow of tepid flushing fluid for a minimum of 15 minutes. (Sections 6.1.6, 6.4.5, 6.4.6, 8.2.1)	(lukewarm) 60–100°F (15.6–37.8°C) encourages full 15 minute flush or until medical personnel arrive. (Definitions, Sections 6.4.6, 8.2.1, Appendix B6)	Manufacturers may have their safety fixtures independently evaluated by a third-party testing organization. Look for certification when selecting a compliant fixture. (Definitions)	Flush lines and test by activating weekly. Inspection tags are often included with fixtures to document testing and to satisfy a safety audit. (Sections 6.5.2, 8.2.1, 8.2.4.2)	ANSI recommends a comprehensive annual inspection of the facility to evaluate modified work space, assess new hazards introduced into the area, and to identify fixtures needing replacement or repair. (Sections 6.5.5, 8.2.4.5)

Mounts under the deck to guide the hose

Deck- and Wall-Mounted Eye and Eye/Face Washes

Overview

A variety of laboratory fixtures are available to accommodate traditional and non-traditional installations. Elementary schools, hospitals, universities and research facilities equip their premises with these versatile, yet unique fixtures. Laboratory fixtures may be faucet, deck, wall, or counter-mounted. Bradley offers a diverse variety of fixtures to provide Eyewash solutions where space is restricted and safety is of the utmost importance.

Key Features

- Chrome-plated brass pipe
- Paddle or push down handle activation
- ½" (13 mm) Inlet
- All items comply with ANSI/ISEA Z358.1

Emergency Fixture Facts

The emergency fixture must be on the same level as the hazard. ANSI/ISEA Z358.1 Section 5.4.2

For additional safety products typically installed in laboratory applications, please consider:

Swing-Activated Eye and Eye/Face Washes

Overview

Eyewash or eye/face wash fixtures that are swing activated are often located on lavatory decks that need to be available for a variety of different uses. A swing-activated fixture provides access to an ANSI-compliant fixture, while simultaneously making full use of valuable, yet limited space. Choose from a variety of wall-mounted or deck-mounted designs that swing out of the way when the fixture is in its resting position, but is still accessible for use during an emergency.

Key Features

- Chrome-plated brass pipe
- Swing-down or swing-over activation controlled between two precise ceramic discs
- 20° activation and deactivation reduces splashing
- All items comply with ANSI/ISEA Z358.1
- Halo Eyewashes and eye/face washes provide the most wash down coverage available
- Halo dust cover caps on the Eyewash are hinged for a more secure hold – keeping dust and debris off the water spouts

Emergency Fixture Facts

ANSI identifies a door as a barrier. ANSI/ISEA Z358.1, Appendix B5.

For additional safety products typically installed in laboratory applications, please consider:

The current ANSI standard calls for emergency Eyewashes and drench showers to deliver tepid water (60–100°F/15.5–37.7°C) for 15 minutes. A thermostatic mixing valve is needed to mix the hot and cold water supply. Bradley's Navigator TMVs are the most reliable emergency TMVs on the market. One valve is required per plumbed unit.

Quick Compliance Guide

This guide serves as a supplement to the ANSI/ISEA Z358.1-2014 standard.

Laboratory Eye & Eye/Face Wash Fixtures

- Valve mechanism opens in one second or less; it stays open until manually closed. (Sections 5.2, 6.2) **1**
- Supply with flushing fluid, ("potable water, preserved water, preserved buffered saline solution or other medically acceptable solution...") (Definitions, Sections 5.1.1, 6.1.1)
- Locate 10 seconds or 55' (16.8 m) from contaminants or hazardous materials.
- Locate on same plane as the hazard, free of obstructions. (Sections 5.4.2, 6.4.2, Appendix B5)
- Protect unit heads from contaminants. (Sections 5.1.3, 6.1.3) **2**
- Flow Rates: Eyewash unit delivers a minimum of .4 GPM for 15 minutes. (Section 5.1.6) Eye/face wash unit delivers a minimum of 3.0 GPM (11 L/Min) for 15 minutes. (Section 6.1.6)
- Use a flow meter to test flow rate; use a test gauge to test flow pattern. (Sections 5.1.8, 5.3.1, 6.1.7, 6.3)

The Joint Commission 2009 EC Standard for Hospitals requires: "The hospital takes action to minimize or eliminate identified safety and security risks in the physical environment." Furthermore, hospitals are required to "Minimize risk associated with selecting, handling, storing, transporting, using, and disposing hazardous chemicals." Surveyors commonly refer to OSHA requirements and the ANSI Standard for further guidance on best demonstrated practices.

Top down view

Required to be free of obstructions a minimum of 6" (152 mm) from the outside of the eye or eye/face wash sprayheads. (Sections 5.4.4, 6.4.4) **3**

Use a Bradley test gauge (Model 269-1444) to check flow pattern. **4**

15-minute Flush	Tepid Water	Third-Party Certifications	Weekly Activations:	Annual Inspections
Compliant fixtures release a continuous flow of tepid flushing fluid for a minimum of 15 minutes. (Sections 5.1.6, 5.4.5, 5.4.6, 6.1.6, 6.4.5, 6.4.6)	(lukewarm) 60–100°F (15.6–37.8°C) encourages full 15 minute flush or until medical personnel arrive. (Definitions, Sections 5.4.6, 6.4.6, Appendix B6)	Manufacturers may have their safety fixtures independently evaluated by a third-party testing organization. Look for certification when selecting a compliant fixture. (Definitions)	Flush lines and test by activating weekly. Inspection tags are often included with fixtures to document testing and to satisfy a safety audit. (Sections 5.5.2, 6.5.2)	ANSI recommends a comprehensive annual inspection of the facility to evaluate modified work space, assess new hazards introduced into the area, and to identify fixtures needing replacement or repair. Recessed Drench Showers, Eye and Eye/Face Washes

Overview

The recessed, corrosion-resistant, brushed stainless steel units offer a sleek, modern look. Frequently installed in hospitals, high schools, universities and laboratories, these fixtures maximize the space available. Many of the fixtures in this category include an integral drain pan, which collects the water run-off from the Eyewash and directs it into the drain, encouraging weekly activation. Halo eye or eye/face wash targets those areas of the body where a gentle spray of water is optimal.

Key Features

- SpinTec showerhead improves water distribution
- Fixtures exceed ANSI-mandated flow rates
- Flush-mounted, corrosion-resistant, type 304 stainless steel cabinet
- Various modes of activation are available (fully recessed, surfacemounted or pull down handles)
- Swing down activation controlled between two precise ceramic discs
- All items comply with ANSI/ISEA Z358.1
- Halo Eyewashes and eye/ face washes provide the most washdown coverage available
- Halo dust cover caps on the Eyewash are hinged for a more secure hold, keeping dust and debris off the water spouts

Emergency Fixture Facts

Emergency fixtures must be activated on a weekly basis and inspected annually. ANSI/ISEA Z358.1 Section 4.6.2, 5.5.2, 6.5.2, 7.5.5

Suggested Accessories

Standard and Explosion-Proof Signaling Systems	page 56-58
--	------------

Drench Shower Testers	page 84
-----------------------	---------

Other parts and accessories are listed beginning on page 84

Recommended Emergency TMV

Navigator EFX 25 (S19-2100)

The current ANSI standard calls for emergency Eyewashes and drench showers to deliver tepid water (60–100°F/15.5–37.7°C) for 15 minutes. A thermostatic mixing valve is needed to mix the hot and cold water supply. Bradley's Navigator TMVs are the most reliable emergency TMVs on the market. One valve is required per plumbed unit.

Barrier-Free, Recessed Drench Showers

S19-125BF

Fully recessed, push-down, coated stainless steel handle for quick and easy activation

Extended stainless steel shroud

UL classified to meet ANSI/ISEA Z358.1

S19-125BF

S19-125SBF

Same features as S19-125BF, except with stainless steel plate to conceal ball valve

Surface-mounted, coated stainless steel handle for quick and easy activation

Extended stainless steel shroud

UL classified to meet ANSI/ISEA Z358.1

S19-125SBF

S19-125FMBF

Same features as S19-125BF, except with flush-mounted showerhead

UL classified to meet ANSI/ISEA Z358.1

S19-125FMBF

S19-125SFMBF

Same features as S19-125SBF, except with flush-mounted, showerhead

UL classified to meet ANSI/ISEA Z358.1

S19-125SFMBF

Cabinet-Mounted Swing-Down Eyewash

S19284H 

Activated when arm is pulled down

Wide access panel in front of unit for easy accessibility and serviceability

UL classified to meet ANSI/ISEA Z358.1

S19284H

S19284J 

Activated when arm is pulled down

Wide access panel in front of unit for easy accessibility and serviceability

UL classified to meet ANSI/ISEA Z358.1

Recommended Emergency TMV

Navigator EFX 8 (S19-2000)

The current ANSI standard calls for emergency Eyewashes and drench showers to deliver tepid water (60–100°F/15.5–37.7°C) for 15 minutes. A thermostatic mixing valve is needed to mix the hot and cold water supply. Bradley's Navigator TMVs are the most reliable emergency TMVs on the market. One valve is required per plumbed unit.

Barrier-Free, Cabinet Concealed Swing-Down Eyewash

S19294HB

Concealed, cabinet-mounted Eyewash

Gas spring allows the door to descend in a smooth and controlled manner

Activated by opening the stainless steel door

Wide access panel in front of unit for easy accessibility and serviceability

Designed to mount in a 4" (102 mm) deep wall

UL classified to meet ANSI/ISEA Z358.1

S19294HB

Barrier-Free, Cabinet Concealed Swing-Down Eye/Face Wash

S19294JB

Concealed, cabinet-mounted eye/face wash

Gas spring allows the door to descend in a smooth and controlled manner

Activated by opening the stainless steel door

Wide access panel in front of unit for easy accessibility and serviceability

Bottom-fed emergency TMV may be installed in maintenance compartment below fixture (recommended S19-2000EFX)

Designed to mount in a 6" (152 mm) deep wall

UL classified to meet ANSI/ISEA Z358.1

S19294JB

S19294HBT

Same features as S19294HB, except with P-trap

UL classified to meet ANSI/ISEA Z358.1

S19294JBT

Same features as S19294JB, except with P-trap

UL classified to meet ANSI/ISEA Z358.1

UL classified to meet ANSI/ISEA Z358.1

Recommended Emergency TMV

Navigator EFX 60 (S19-2200)

The current ANSI standard calls for emergency Eyewashes and drench showers to deliver tepid water (60–100°F/15.5–37.7°C) for 15 minutes. A thermostatic mixing valve is needed to mix the hot and cold water supply. Bradley's Navigator TMVs are the most reliable emergency TMVs on the market. One valve is required per plumbed unit.

Drench Showerheads

Recessed flush-mounted showerhead provides smallest footprint in ceiling. For the most durable showerhead, select stainless steel which stands up to corrosion and aggressive impact.

Eyewashes

When the safety risk targets the eye area, Bradley's Eyewashes are the recommended solution for emergency care. The Halo Eyewash sprayhead flows at approximately 5.1 GPM (19 L/Min), exceeding ANSI's 0.4 GPM (1.5 L/Min) flow rate. The flow gently flushes water directly on the eye to wash out contaminants.

Eye/Face Washes

When chemicals and other hazardous liquids can contaminate the face and eyes, an eye/face wash is the solution. Bradley's Halo eye/face wash sprayhead features integral flow controls that provide a soft flush of approximately 5.1 GPM (19 L/Min). Eye/face washes are considered premium fixtures that exceed ANSI's 3.0 GPM (11 L/Min) mandate.

Flow Controls

In the interest of water conservation, each shower head features an integral 20 GPM (76 L/Min) flow control. This item must be purchased separately for most competing brands.

On-Site[®] Portable Gravity-fed Eyewashes

Overview

The On-Site (S19-921) portable Eyewash is the most innovative gravity-fed Eyewash currently on the market. Employing a patented design, the On-Site is the only Eyewash on the market that uses just 7 gallons of water that provides a full 15-minute flush, at the ANSI-mandated flow rate and maintains a consistent height throughout the spray pattern until the last drop of liquid is depleted from the tank. The clear yellow polycarbonate tank offers an exclusive vandal-resistant design that makes worker safety a priority.

Key Features

- Transparent tank allows solution level to be checked easily
- High-visibility yellow, molded pedestal and tank
- Vandal-resistant, patented design
- 7 gal/27 L (60 lbs/27 kg) provides full 15-minute flush
- Heater jacket available to prevent freezing
- Complies with ANSI/ISEA Z358.1
- One-year warranty

Emergency Fixture Facts

ANSI requires the visual inspection of self-contained Eyewashes to be certain the tank is full and ready for use. ANSI/ISEA Z358.1 Section 5.5.3

Ideal for locations where a plumbed water source is not available.

Quick Compliance Guide

This guide serves as a supplement to the ANSI/ISEA Z358.1-2014 standard.

Self-Contained Eyewash Fixtures

- Eyewash unit delivers a minimum of .4 GPM for 15 minutes. (Section 5.3.2)
- Valve mechanism opens in one second or less; it stays open until manually closed. (Section 5.3.2)
- Supply with flushing fluid, ("potable water, preserved water, preserved buffered saline solution or other medically acceptable solution...") (Definitions, Section 5.1.1)
- Locate 10 seconds or 55' (16.8 m) from contaminants or hazardous materials. Locate on same plane as the hazard, free of obstructions. (Sections 5.4.2, Appendix B5)
- Use a test gauge to test flow pattern. (Section 5.4.7)
- Frigid conditions require the installation of freeze protection equipment. (Section 5.4.5) ①

Top down view

Required to be free of obstructions a minimum of 6" (152 mm) from the outside of the Eyewash sprayheads. (Sections 5.4.4) ②

Use a Bradley test gauge (Model 269-1444) to check flow pattern. ③

15-minute Flush	Tepid Water	Third-Party Certifications	Weekly Activations:	Annual Inspections
Compliant fixtures release a continuous flow of tepid flushing fluid for a minimum of 15 minutes. (Sections 5.1.6, 5.4.5, 5.4.6)	(lukewarm) 60–100°F (15.6–37.8°C) encourages full 15 minute flush or until medical personnel arrive. (Definitions, Sections 5.4.6, Appendix B6)	Manufacturers may have their safety fixtures independently evaluated by a third-party testing organization. Look for certification when selecting a compliant fixture. (Definitions)	Flush lines and test by activating weekly. Inspection tags are often included with fixtures to document testing and to satisfy a safety audit. (Sections 5.5.2)	ANSI recommends a comprehensive annual inspection of the facility to evaluate modified work space, assess new hazards introduced into the area, and to identify fixtures needing replacement or repair. (Sections 5.5.5)

Perforated foam liner

Sold individually

Portable Pressurized Eyewashes

Overview

Looking for a portable Eyewash that will withstand corrosive materials in isolated locations, can be used on trucks or areas without plumbing that require a 15-minute flush? Bradley's stainless steel portable pressurized tanks resist corrosion, and offer several options for customers that are looking for an Eyewash with a drench hose, or even a tank outfitted with a heater jacket to prevent freezing. Portable pressurized tanks are a versatile, corrosion-resistant solution, to provide an ANSI-compliant fixture in remote or non-plumbed locations. Portable pressurized fixtures balance the volume of water with a predetermined amount of pressure to maximize the time and volume of solution that provides a flush. The portable pressurized Eyewash offers the convenience of a portable unit, is sold in a range of sizes, and the heater jacket option offers flexibility to handle a wide range of applications.

Key Features

- Built-in carrying handles
- Tire filler valve with 0 – 160 psi (1103 kPa) air gauge
- Pressure relief valve to prevent over pressurization
- 8' (2.4 m) drench hose (unless otherwise specified)
- Chrome-plated brass Eyewash
- All items comply with ANSI/ISEA Z358.1

Emergency Fixture Facts

ANSI guidelines require that emergency fixtures supply potable water, preserved water, preserved buffered saline solution, or an alternative medically accepted solution.

Freeze and Scald Protection Valves

Bradley's freeze and scald protection valves coupled with Navigator tempering systems serve an important role. Although the tempering system supplies the fixture with tepid water, environmental conditions may cause the water to freeze or become scalding hot. To ensure the fixture is ready to use and the water is safe for your employees at all times, consider the addition of a freeze or scald protection valve, to bleed off water in extreme temperatures.

Freeze Protection Valve Kits

S45-1986
For use with Eyewashes

S45-1987
For use with drench showers

* Classic combination fixtures require one each of S45-1986 and S45-1987. Halo combination fixtures only require one S45-1986.

Scald Protection Valve Kits

S45-1989
For use with Eyewashes

S45-1990
For use with drench showers

* Classic combination fixtures require one each of S45-1989 and S45-1990. Halo combination fixtures only require one S45-1989.

S90-391

S90-392

Stainless steel bowl kit

316 stainless steel

Retrofit Classic Dust Covers

S45-1964

Compatible with any Bradley classic plastic Eyewash bowl

Fixture not included

S45-1964

S45-2396

For use with any Bradley classic Eyewash bowl

Includes welded stainless steel clam shell cover, stainless handle with teather and quick release pin

S45-2396

Drench Shower Handle for Standard Units

128-156A

25½" (648 mm) pull rod only

Standard pull rod shipped with non-barrier-free showers

128-156A

128-156B

36" (914 mm) pull rod only

Drench Shower Handle for Barrier-Free Units

128-156C

48" (1219 mm) pull rod only

128-156D

45½" (1156 mm) pull rod only

Standard pull rod shipped with barrier-free showers

128-156E

57" (1448 mm) pull rod only

128-156F

69" (1753 mm) pull rod only

128-156D

Drench Shower Handle for Heat Trace Units

128-156G

27" (686 mm) pull rod only

SpinTec Showerhead Retrofit Kits

Universal retrofit kits include all items shown

S24-192

Ornamental plastic shroud with ring – showerhead nozzle not included

S24-192

S24-202

In-ceiling recessed showerhead assembly, with 5 $\frac{7}{8}$ " (149 mm) white steel shroud, includes 90° elbow

S24-202

S24-193

Ornamental stainless steel shroud with ring – showerhead nozzle not included

S24-193

154-147

Ring only

154-147

S24-194

Showerhead nozzle and 90° elbow

S24-194

Drench Shower Ball Valve

S27-276

Stainless steel 1" (25 mm) ball valve only

S24-195

S27-278

Chrome-plated brass 1" (25 mm) ball valve only

S24-195

Ornamental plastic shroud with ring, showerhead nozzle and 90° elbow

S24-196

S30-059

Chrome-plated brass 1" (25 mm) ball valve with lever

S30-059

S24-196

Ornamental stainless steel shroud with ring, showerhead nozzle and 90° elbow

S24-200

304 Stainless steel showerhead and 90° elbow

S24-200

S30-061

Stainless steel 1" (25 mm) ball valve with lever

Self-Closing Ball Valve

S19-0011

Note: Self-closing ball valves are not ANSI/ISEA Z358.1 compliant. Appendix B3. However, an exception may be made in a "school laboratory situation." Contact local authorities regarding specific application.

Foot Treadle Kits

S39-395

Includes all necessary fittings for attaching to wall-mounted Eyewashes for hand or foot operation

S39-395

S45-572

Includes all necessary fittings for attaching to Bradley pedestal-mounted Eyewashes and combination showers for hand or foot operation

S45-572

S45-620

Same as S45-572, except designed for S19-310PVC shower only

S45-1314SS

Stainless steel type 316 foot treadle that includes all necessary type 304 fittings for attaching to Bradley pedestal-mounted Eyewashes and combination showers/Eyewashes for hand or foot operation

S45-1314SS16

Stainless steel type 316 foot treadle that includes all necessary type 316 fittings for attaching to Bradley pedestal-mounted Eyewashes and combination showers/Eyewashes for hand or foot operation

Optional Adapters

153-395

Female, $\frac{13}{16}$ " (21 mm) x 24—Chrome

153-396

Male, $\frac{3}{8}$ " (10 mm) NPSM—Chrome

153-401

Female, $\frac{3}{4}$ " Garden Hose—Chrome

Standard Specifications

Halo S19214, S19224 & S19314 Series

Eyewash Bowl

14" (356 mm) corner to corner, yellow impact-resistant plastic, Type 304 corrosion-resistant stainless steel or Type 316 corrosion-resistant stainless steel

Sprayhead Assembly

All sprayhead assemblies include flow control to assure safe, steady water flow under varying water supply conditions (up to 90 PSI) and flip-top protective spray covers

Halo Eyewash

- ABS plastic soft-flow sprayheads designed to gently cleanse the eyes
- Exceeds minimum water flow: 0.4 GPM (1.5 L/Min) at 30 psi (207 kPa)
- Flip-open dust covers that open automatically when unit is activated
- Self-draining design eliminates standing water

Halo Eye/Face Wash

- ABS plastic soft-flow sprayheads designed to gently cleanse the eyes and face
- Exceeds minimum water flow: 3.0 GPM (11 L/Min) at 30 psi (207 kPa)
- Flip-open dust covers that open automatically when unit is activated
- Self-draining design eliminates standing water

SpinTec Showerhead

- 3.1" (79 mm) diameter
- Uniform distribution of water
- Integral flow control provides a minimum of 20 GPM (76 L/Min)

ANSI Compliance

Unless otherwise indicated, all units comply with the ANSI/ISEA Z358.1 standard

Eyewash Valve

1/2" stay-open eye and eye/face wash valve manufactured of the following materials and supplied with either type 304 or 316 stainless steel handle that can be activated from both the left and right side of the unit

- Chrome-plated brass
- Type 316 stainless steel

Shower Valve

1" (25 mm) stay-open eye and eye/face wash valve manufactured of the following materials and supplied with either type 304 or 316 stainless steel pull rod

- Chrome-plated brass
- Type 316 stainless steel

Pipe and Fittings

- 1/4" piping assembly manufactured of one of the following materials
- Galvanized steel with BradTect safety yellow coating
- Type 304 corrosion-resistant stainless steel
- Type 316 corrosion-resistant stainless steel
- Chrome-plated red brass.

Water Supply

Wall-mounted and pedestal-mounted: 1/2" NPT female

Waste

Eyewash: 1/4" NPT female drain fitting

Transparent Plastic or Stainless Steel Dust Cover

- Protects entire bowl to keep contaminants, dust, and other debris from Eyewash area
- Dust cover opens when push handle is activated
- Constructed of transparent yellow impact-resistant plastic, type 304 corrosion-resistant stainless steel or type 316 corrosion-resistant stainless steel.

Additional Features

- **Eyewash mounting**
Heavy-gauge aluminum with four clearance holes for wall mounting (hardware not included)
All units are barrier free when mounted at the correct height
- Separate supply and waste, eliminates cross contamination risk
- Contains an antimicrobial agent to protect the sprayhead
- UL recognized to meet the ANSI/ISEA Z358.1 Standard

Standard Specifications

Classic Models

(exceptions noted)

Eyewash Bowl

10" (254 mm) diameter, yellow, impact-resistant plastic or corrosion-resistant stainless steel

Sprayhead Assembly

All sprayhead assemblies include flow control to assure safe, steady water flow under varying water supply conditions (up to 90 psi/621 kPa) and pop-off protective spray covers

- **Eyewash**

Chrome-plated brass, soft-flow sprayheads designed to gently cleanse the eyes – stainless steel where specified
Exceeds minimum water flow: 0.4 GPM (1.5 L/Min) at 30 psi (207 kPa)

- **Eye/Face Wash, Dual Sprayheads**

Contains an antimicrobial agent to protect the sprayhead
ABS plastic perforated disc sprayheads designed to gently cleanse the eyes and face
Exceeds minimum water flow: 3.0 GPM (11 L/Min) at 30 psi (207 kPa)

- **Face Spray Ring**

Chrome-plated, circular spray ring designed with a wider spray pattern for full face spray

SpinTec Showerhead

- Yellow, impact-resistant plastic or corrosion-resistant stainless steel
- 3.1" (79 mm) diameter
- Uniform distribution of water
- Integral flow control provides a minimum of 20 GPM (76 L/Min)

Drench Hose

- 8' (2.4 m) yellow, reinforced thermoplastic hose (unless otherwise specified)
- 450 PSI burst strength
- Recoiling hose (where specified) retracts for storage while allowing easy extension in emergency situations

ANSI Compliance

Unless otherwise indicated, all units comply with the ANSI/ISEA Z358.1 standard

Drench Hose Series S19-430 through S19-630 Specifications

Drench Hose Valve

Chrome-plated valve with extended reinforced handle remains open once handle is squeezed.

- S19-630: Uses a ½" (13 mm) NPT chrome-plated brass, stay-open ball valve operated by a stainless steel push handle

Water Supply

Drench hoses: ¾" (10 mm) NPT male thread with removable ½" NPT female reducing coupling

Series S19-921 On-Site® Gravity-Fed Eyewashes

On-Site Gravity-Fed Eyewash

Can be mounted on a wall or deck. Stainless steel bracket included for wall mounting. Molded handle design for easy transportability. Should be placed in a fixed location when completely assembled and filled with fluid.

- Seven-gallon fill capacity
- Easy to clean, refill, and check solution
- Meets 15-minute minimum flushing requirement at 0.4 GPM
- Transparent yellow, polycarbonate tank – visual reminder when it is time to clean or refill the tank
- Blow-molded design prevents leakage
- Opaque yellow, polypropylene pedestal with hinged Eyewash tray
- Eyewash tray pulls down in one quick motion – water flow is activated by this motion
- Removable tank is inverted onto the pedestal, piercing a liner
- Weighs 23 lbs (10 kg) when empty and 60 lbs (27 kg) filled

On-Site Waste Cart

Utilized with the Gravity-Fed Eyewash product.

- High-visibility yellow, polyethylene with 56 gal (212 L) capacity
- Captures used fluid from unit
- Tapered sump allows for easy drainage

Gravity-Fed Heater Jacket

- 121-watt heater enclosed in an insulated jacket
- Secondary thermostat with warning light and manual reset button helps prevent overheating in case of primary thermostat failure
- Requires 120-volt AC line
- All UL-listed components

Drench Shower Series S19-110 thru S19-130 and Combination Units Series S19-310 Shower Specifications

Shower Valve

1" (25 mm) NPT chrome-plated brass, stay-open ball valve operated by a stainless steel pull rod with triangular handle.

- Barrier-free pull rod extends to 48" from floor
- S19-130F and S19-120G Cord operated with self-closing ball valve
Not compliant with ANSI/ISEA Z358.1

Pipe and Fittings

Standard: Galvanized steel pipe protected with BradTect yellow coating (unless otherwise specified).

- Vertical/horizontal shower: 1" (25 mm) pipe
- Freestanding shower, combination units: 1¼" pipe
- PVC combination shower: 2" (51 mm) Schedule 80

Water Supply

- Vertical/horizontal shower: 1" (25 mm) NPT female
- Freestanding shower, combination and barrier-free units: 1¼" NPT female

Drench Showers Series S19-120HFP; Eyewash Series S19-220HFP; Combination 310TW Frost-Proof Units

Eyewash Bowl/Sprayhead/Showerhead

See standard specifications

Through Wall Units

- Standard option is 8–12" (203–305 mm) wall thickness
- 0–8" (0–203 mm) and 12–18" offered as special orders

Valve

1" (25 mm) NPT chrome-plated brass, stay-open ball valve is hand operated by a stainless steel handle

Pipe and Fittings

1¼" galvanized steel pipe protected by BradTect yellow coating (unless otherwise specified)

Water Supply

- ½" (13 mm) NPT female (model S19-220HFP)
- 1" (25 mm) NPT female (model S19-120HFP)
- 1¼" (32 mm) NPT female (all other models)

Eyewash Series S19-200 thru S19-270JC; Combination Units Series S19-310 Plumbed Eyewash Specifications

Eyewash Valve

½" NPT chrome-plated brass, stay-open ball valve operated by a high-visibility yellow PVC or stainless steel (where specified) push handle.

• **Faucet-mounted unit**

- Activates when water is turned on at faucet and activator pin on Eyewash is pulled toward user
- Applied water pressure keeps activator pin open
- Faucet will maintain normal operation for hand washing, etc. when activator pin is closed

• **Swing-activated units (where indicated):**

- The swinging motion of the unit operates Eyewash valve – no additional handle is required

Pipe and Fittings

Standard: Galvanized steel pipe protected with BradTect yellow coating (unless otherwise specified); laboratory and swing-activated units are primarily chrome-plated brass.

- Wall-mounted Eyewash, laboratory Eyewash: ½" pipe
- Pedestal Eyewash: 1¼" pipe

Water Supply

- Wall-mounted, pedestal-mounted, swing-activated Eyewash ½" NPT female
- Laboratory: ½" NPT (unless otherwise specified)

Waste

Eyewash: Dome-type strainer and 1¼" NPT female drain fitting with tailpiece (P-trap to conform to local codes by others unless otherwise specified)

Hinged Stainless Steel Dust Cover

- Protects entire bowl to keep contaminants, dust, and other debris from Eyewash area
- Dust cover springs open when push handle is activated

Additional Features

- **Eyewash wall bracket**
Heavy-gauge aluminum with three clearance holes for wall mounting (hardware not included)
Barrier-free unit is stainless steel with four clearance holes for wall mounting
- **S19-220BF stainless steel, wrap-around skirt:**
10" diameter corrosion-resistant stainless steel
Conceals plumbing – unit extends 20" from wall

Series S19-304 Heat Traced Showers

Showerhead/Sprayheads

See standard specifications

Shower Valve

1" (25mm) NPT chrome-plated brass, or 316 stainless steel, stay-open valve is operated by a stainless steel pull rod with triangular handle

Eyewash Valve

1/2" NPT chrome-plated brass, or 316 stainless steel, stay-open valve hand operated by a stainless steel handle

Pipe and Fittings

1/4" galvanized steel, 304 stainless steel, or 316 stainless steel.

Electric Heat Trace Cable*

- Wraps around pipe, cable is self-regulated to 50°F (10°C) to protect against overheating and cold spots
- Thermal rating: 5 watts/foot
- Service voltage: 120-volt AC or 240-volt AC
- Amperage/wattage: .7 amp/80 watts at 50°F (10°C) unit water temperature

Pipe Insulation

- 3/4" polyethylene closed cell encases pipe and heat trace cable
- Vertical semi-split allows insulation to be easily removed and re-assembled

Protective Outer Shell

- UV-stabilized ABS plastic
- Six easy-to-remove sections
- Designed for quick repairs and maintenance
- Sealed with rivets for added weather protection
- Resists chemical and other harsh environments

Freeze Protection Valve

- Continual flow of water when internal temperatures drop below 35°F (2°C)
- Valve closes at 45°F (7°C)
- Max pressure rating of 200 psi (1379 kPa)

Thermostat*

Opens at 64°F (18°C) and closes at 54°F (12°C)

Junction Box

General area junction box is plastic with one extra 3/4" conduit hole. Hazardous location junction boxes are aluminum with multiple hubs. Accepts 3/4" IPS conduit.

Water Supply

- 1 1/4" (44 mm) NPT male top or bottom supply

* Standard specification components are rated for General Area, Class 1 Division 2 Groups B, C, and D, Class 1 Division 1 Groups C and D, and Class II Division 1 and 2 Groups E, F, C and G. All units are CSA listed.

Series S19-670 thru S19-788 Pressurized Stainless Steel Eyewash Tanks

Eyewash Sprayhead/Drench Hose

- See standard specifications
- Available in 5 gal (19 L), 10 gal (39 L) and 15 gal (57 L) capacities. Built-in carrying handles and resilient bottom. Tire filler valve with 0-160 PSI (0- 1100 kPa) air gauge. Pressure relief valve prevents accidental over pressurization.

NOTE: Do not exceed 130 PSI tank pressurization.

Portable Heated Units

- Secondary thermostat with manual reset button helps prevent overheating in case of primary thermostat failure
- Plugs into any 120-volt AC line
- All UL listed components.
- 10 gal (39 L) and 15 gal (57 L) units provide 15 minutes of tempered water flow from Eyewash
- GFCI recommended
